SUPPLEMENTAL APPEAL BRIEF

Commissioner for Patents
Washington, D.C. 20231

Dear Sir:

I. INTRODUCTION

In accordance with 37 C.F.R. §1.193(b)(2)(ii), Appellants' attorney hereby submits Appellants' Supplemental Appeal Brief (in triplicate) from the rejection of claims 1, 4, 14-15, 21, 25, 28, 38-39, 45, 48-51, and 65-68 of the above-identified application, as set forth in the Office Action dated March 18, 2002.

This Supplemental Appeal Brief hereby incorporates by reference such parts of the previously-filed Brief of the Appellants as may still be applicable, in order to comply with the requirements of 37 CFR §1.192(c). However, the arguments presented herein are only those relevant to the new grounds of rejection raised in the Office Action that re-opened prosecution.

No fees are due for this Supplemental Appeal Brief. Nonetheless, the Office should charge any additional fees or credit any overpayments to Deposit Account No. 50-0494 of Gates & Cooper LLP.

II. THE EXAMINER'S OFFICE ACTION

A. Claim Rejections

In the Office Action dated March 18, 2002, the Examiner withdrew his previous rejections of claims 1, 4, 21, 25, 28, 45, 48-51, and 65-68 under 35 U.S.C. §102(e) as being anticipated by Venolia, U.S. Patent No. 5,463,722 (Venolia), and replaced them with rejections of claims 1, 4, 21, 25, 28, 45, 48-51, and 65-68 under 35 U.S.C. §103(a) as being obvious in view of Venolia, U.S. Patent No. 5,463,722 (Venolia).

The remaining rejections were unchanged. Specifically, claims 14-15 and 38-39 were rejected under 35 U.S.C. §103(a) as being unpatentable by Venolia in view of Eckart, U.S. Patent No. 5,408,606 (Eckart), and claim 24 was rejected under 35 U.S.C. §103(a) as being obvious in view of the combination of Venolia, U.S. Patent No. 5,463,722 (Venolia) and Rostoker, U.S. Patent No. 5,623,418 (Rostoker).

On the other hand, claims 2-3, 5-13, 16-20, 22-23, 26-27, 29-44, 46-47, 52-64, and 69-81 were still indicated as being allowable if rewritten in independent form to include the base claim and any intervening claims.

III. ARGUMENTS

Although the Examiner withdrew his previous rejections of claims 1, 4, 21, 25, 28, 45, 48-51, and 65-68 under 35 U.S.C. §102(e) as being anticipated by Venolia, U.S. Patent No. 5,463,722 (Venolia), and replaced them with rejections of claims 1, 4, 21, 25, 28, 45, 48-51, and 65-68 under 35 U.S.C. §103(a) as being obvious in view of Venolia, U.S. Patent No. 5,463,722 (Venolia), the basis for the rejections remains essentially the same. For example, the same portions of Venolia are used to support the rejections. In response to the Appellants' assertion that Venolia does not teach the "dynamically updating" limitations of the Appellants' independent claims, the Examiner states that this element is implied, which is why the rejection has been changed from one based on 35 U.S.C. §102(e) to one based on 35 U.S.C. §103.

Appellants' attorney disagrees with this assertion. Moreover, this Supplemental Appeal Brief hereby incorporates by reference such parts of the previously-filed Brief of the Appellants as is still applicable, in order to comply with the requirements of 37 CFR §1.192(c). The arguments presented below essentially reiterate the arguments of the previously-filed Brief of the Appellants, but also address this new grounds of rejection raised in the Office Action.

A. Appellants' Independent Claims 1, 21, 24-25, And 45 Are Patentable Over The References

With regard to independent claims 1, 21, 24-25, and 45, the Appellants' invention is patentable over Venolia, because Venolia does not teach nor suggest the various elements of Appellants' claims. Specifically, Venolia does not teach or suggest the combination of claim limitations directed to: moving a selected graphic object relative to a graphic pointing symbol, determining when a selected graphic object is within a predetermined proximity of an underlying graphic object, manipulating the selected graphic object into a geometric relationship with the underlying graphic object according to predetermined geometric rules, and dynamically updating the geometric relationship based on movement of the graphic pointing symbol while the graphic pointing symbol remains within the predetermined proximity of the underlying graphic object.

In the Office Action, the Examiner asserts that the "dynamically updating" limitations of the Appellants' independent claims can be found in Venolia at col. 5, lines 8-11 (more accurately, col. 4, line 67 – col. 5, line 14).

However, at the indicated location, Venolia sets forth only the following:

"The present invention provides a method for aligning a displayed representation of an object comprising the steps of, displaying a representation of a first object in an initial position on a display screen under the control of a processor, displaying a representation of a second object on a display screen under the control of a processor, moving the representation of the first object toward the second object in a visually continuous manner using a cursor whose position is controlled by a cursor movement mechanism, calculating a current position for the first object which is displaced from a cursor dictated position by an amount which is determined as if the first object was under the gradual influence of an alignment field emanating from the second object, and displaying a representation of the first object on the display screen in the current position."

According to the Examiner, the "dynamically updating" limitations of the Appellants' independent claims are implied by this discussion in Venolia, because if the position of the cursor is related to the position of the first object, and the position of the first object is related to the position of the second object through the alignment field, the geometric relationship of the cursor to the second object is dynamically updated.

Appellants' attorney disagrees.

Venolia merely describes an alignment field gradient which emanates from objects surrounding a manipulated object. Moreover, the relationship between the objects in Venolia is not based on the position of the pointing symbol relative to the underlying object, but is based instead on the proximity of the objects themselves. Further, the relationship between the objects in Venolia is not dynamically updated while the cursor remains within a predetermined proximity of the underlying object.

The various elements of Appellants' claimed invention together provide operational advantages over Venolia. In addition, Appellants' invention solves problems not recognized by Venolia. Thus, Appellants submit that independent claims 1, 21, 24-25, and 45 are allowable over Venolia.

B. Appellants' Independent Claims 48 And 65 Are Patentable Over The References

With regard to independent claims 48 and 65, the Appellants' invention is patentable over Venolia, because the cited reference does not teach nor suggest the various elements of Appellants' claims. Specifically, the reference does not teach or suggest the claim limitations directed to displaying a first graphic object on a computer, and then displaying at least one point of interest on the computer when a pointing symbol is within a predetermined proximity of the first graphic object.

Venolia does not identify "points of interest" on an object when a pointing symbol is within a predetermined proximity of the first graphic object. Instead, the entire object is considered to be "magnetic," rather than any specific points of interest on the object. Moreover, the magnetic relationship is between two objects, not between a pointing symbol and an object. Finally, Venolia does nothing to identify points of interest, or even magnetic objects themselves, since all objects are considered to be magnetic.

The various elements of Appellants' claimed invention recited in claims 48 and 65 together provide operational advantages over Venolia. In addition, Appellants' invention as recited in claims 48 and 65 solves problems not recognized by Venolia. Thus, Appellants submit that independent claims 48 and 65 are allowable over the reference.

C. Dependent Claims 4, 14-15, 28, 38-39, 49-51 and 66-68 Are Patentable Over The Prior Art

Dependent claims 4, 14-15, 28, 38-39, 49-51 and 66-68 are also submitted to be allowable over the prior art references. Specifically, the arguments concerning these dependent claims found in the previously-filed Brief of the Appellants are incorporated by reference herein.

IX. CONCLUSION

In light of the above arguments, Appellants respectfully submit that the cited references do not anticipate nor render obvious the claimed invention. More specifically, Appellants' claims recite novel physical features which patentably distinguish over any and all references under 35 U.S.C. §§ 102 and 103. As a result, a decision by the Board of Patent Appeals and Interferences reversing the Examiner and directing allowance of the pending claims in the subject application is respectfully solicited.

Respectfully submitted,

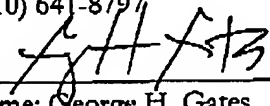

Brian D. Gantt et al.

By their attorneys,

GATES & COOPER LLP
